Applicant's Response

1. In Applicant's Response dated 07/17/2008, Applicant amendments to the claims and provides corresponding arguments that are persuasive.

All objections and rejections previously set forth are withdrawn. The record appears to be clear as to what applicant defines as their invention and provides evidence and amends the claims to further distinguish their invention over the art. Nonetheless the Examiner has provided additional reasons for allowance below.

Allowable Subject Matter

2. Claims 1, 3-5, 11-12, 24 and 26 are allowed.
3. The following is an examiner's statement of reasons for allowance

Claims 1, 12 and 24

The cited prior art clearly teaches modeling systems and visual programming systems. The prior art teaches allowing the user to select items from a palette and dragging the item to the interface to model an abstract concept that is to be converted into a graphical interface object or process (See for example) the prior art of Gilboa (20040148586) and Gupta 5913061 and newly cited art to Talati et al (5390330) and Lovell (7370315). However, as the applicant argues, and positively recites in the claims, the prior art does not teach a process of developing a user interface **without coding** where pre-built reusable components are tasks. The components are defined by providing metadata to instances of the components and then providing the metadata to the modeling environment as an abstract object. The present invention, as claimed, then connects the tasks in a logical order in the environment and to a model to develop the GUI. In contrast, the prior art links the components modeled in the environment to code and generates code. The present application generates a model from tasks that model the components linked to tasks within the interface, which is clearly different from the cited prior art because no code is generated in the process and metadata is used to define the component as a task and it is the

task that is modeled and executed in a logical order. Moreover, the prior art is not seen as teaching or suggesting the limitations of allowing the application designer to verify the correctness of the interface by observing manually defined watch variables and stopping the execution the user interface modeling at a designer defined break point and analyzing information at each point. While the prior art clearly teaches debugging tools that insert break points at methods or test points the debuggers typically are related and execute by running compiled or executed code and then stopping at points of execution of the interface prior to a user interface error. In contrast the break points are manually inserted and are presented while executing a user interface model built from tasks modeled from components represented by metadata. Thus the claims are allowed over the prior art.

Claims 3-11 and 26

These claims are dependent upon Claims 1, 12 and 24, and are thus allowable.

The computer program product as recited in claim 24 and 26, finds support in the amended specification, page 44.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.

Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven B. Theriault whose telephone number is (571) 272-5867. The examiner can normally be reached on M-F 7:30 - 4:00 PM.
